simple technology for everyone

Instruction Manual
Model: SC330

General Information

Congratulations on your purchase of JETHRO 3G turn cell mobile phone design SC330

Please study this information for better handling the product, we assume no responsibility for the result from improper handling.

We are constantly trying to improve our services and product. Therefore Jethro reserves the right to modify any of the products changes and improvements described in this document without prior notice.

The items in this recommendations are presented "as is". Jethro takes no guarantee for the accuracy of completeness of the items in this recommendations. There may be slight variations of the images in the guidelines and the product kind, there serve as examples please make reference to the product. Some functions are dependent on system operators, for more information please get in touch with your system owner.

Please examine the provided components, determine whether the system providers, to find out more please contact your system owner.

Please look into the provided components, figure out whether the below-detailed components are all available, if one of the element is losing or broken, please speak to your supplier where you buy the phone.

Jethro SC330 contents:

- ➢ 1 Telephone *(SC330)*
- ➢ 1 Charging Station *(SC330)*
- ➢ 1 Charger *(SC330)*
- ➢ 1 Lithion-ion Battery (SC330)
- ➢ 1 USB Cable *(SC330)*
- ➢ 1 User Guide (English) *(SC330)*

Specifications:

Quad-Band network:	3G WCDMA 850/1900Mhz 2G GSM 850/900/1800/1900Mhz
Battery	Li-ion 800mAh
Size:	101 x 50.5 x 19.5 mm
Standby time:	<200 hours*
Talk time:	<250 minutes*

General Information

If the font is really little for you to study, please perspective a larger version recommendations on our website.

See the product support web page on our website: www.jethroshop.com

Getting started

What is a SIM card?

What is a SIM card?
Each cell mobile phone needs a SIM credit score cards (subscriber identification module). Without the SIM credit score cards, you can not create phone calls. The SIM credit score cards is a microprocessor which shops their information and relationships. Deal with a map so effectively, and be careful when placing or taking out the money cards. Keep SIM credit score cards out of the reach of youngsters.

Insert the SIM credit score cards and little SD card

1. The mobile phone must be converted off and disconnected from battery energy charger.
2. Remove battery energy cover on the back of the product.

12

If battery energy in the product, please take it off.

2. See 2 credit score cards holders: top remaining for the SIM credit score cards and the bottom right for the little SD credit score cards.

3. Push the SIM card effectively into the SIM credit score cards port (1). Ensure that the Silver relationships of the bank credit score cards experiencing down and the beveled place is.

4. Carefully start up the microSD credit score cards port entrance, set up the microSD credit score cards into the owner (2) and then protected owner entrance.
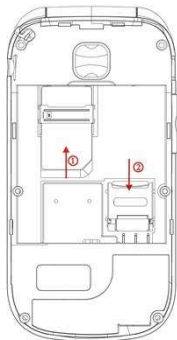

Insert the battery

1. Align the golden relationships of battery energy with corresponding relationships of the product.

2. Press on the other end of battery energy until it locks in position.

3. Slide battery energy door so far on the device up until it clicks into position.
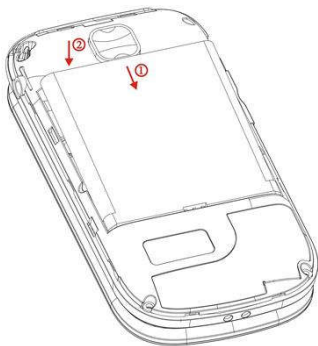

Charging the battery

There are two ways to price battery energy the SC330:
A. Charging station
B. Charger
1. Insert the connector of the charger in the product.
2. Connect the charger to the primary store.
3. Charging battery energy can take several hours. If the phone's battery energy ran out, it may take up to 30 min until the price indication seems to be on the show.
4. If the system is switched on, price indication will appear on the show. The indication will no longer flash when battery energy has been completely billed.
5. Disconnect the charger from the store and from the product if asking for is not required

Note: *The initial price for battery energy should be at least 12 hours.*

Turn on or off the phone

Make sure that the SIM card is on the phone and the battery is a charge.

1. Press *Red button* 8-10 seconds to switch the phone on.
2. The PIN-code is active if the phone asks you the PIN code, please enter it and confirm with *OK*.
3. Please select your language and confirm with *OK*.
4. Press *Red button* 4-5 seconds to turn off the phone. (Press the OK when asking for shutting down permission)

You can only call emergency number without a valid SIM card.

Note: If the PIN code entered incorrectly 3 times, the phone will ask you the PUK code that you have received it together with the SIM card.

Standby

If the phone is not used for a short period of time, the telephone will switch to standby mode automatically. Press any key to exit this mode.

SOS

How does SOS function work? **Caution:** When an SOS call is activated the phone is pre-set to handfree/speakerphone mode. Do not hold the device near your ear when the speakerphone mode is in use, because the volume maybe extremely loud.

How does SOS operate work?

Caution: When an SOS get in touch with is triggered the system is pre-set to handsfree/speakerphone technique. Do not keep the product near your ear when the speakerphone technique in use, because of the quantity may be extremely loud.

The SOS operate work is a simple function that can preserve lives in the decisive moment. You can shop a total of 6 SOS relationships and SMS.

You must preserve these relationships first, in the case of a critical when you media the emergency get in touch with the key on the back of the product, these figures will be called in sequence.

During the emergency call a warning signal will be issued, so the person knows that it is an emergency and it sends an emergency SMS to all stored numbers!

If the first number is not reached, the next number is dialed automatically, etc. If no emergency number is stored or your phone card is empty or you are in a foreign network (E.g. roaming not enabled), you can still choose 911 or other emergency numbers with the digit keys.

Note:

- Want to stop the alarm, must press the right menu button or the SOS button.
- When using a pre-paid SIM card:
  Make sure you always have sufficient credit on your pre-paid SIM card as private emergency numbers without sufficient balances are not elected.
  - Usually the international emergency call 911 can still be called outside of the network provider's home network.

Important note: If you want to store emergency numbers such as rescue, police, fire service etc. as an emergency number, you would need to check before this with the respective institution. Jethro assumes no liability for any costs incurred if you mistakenly call.

SOS Settings:

1. Choose *Menu, settings* and press *OK*
2. Choose *SOS* and press *OK*

SOS Status
You can turn the *SOS function* on and off

SOS numbers (contacts)

1234.

Troubleshooting

If problems or irregularities occur during the use of the phone, read the information in the following table. If a particular problem cannot be solved by the following information, please contact the customer service via email: Jethro@jethroshop.com

The phone will not turn on:
- Check whether the battery is correctly on the phone.
- Check the battery status, charge 24 h long the battery or swap it if necessary from (6 months warranty).
- Check that the PIN code has been entered correctly.
- If the PIN-code 3 x false the SIM card is blocked and you need the PUK code (please contact your network operator for your PUK code).

SIM card error:
- Dirt on the contact areas of the SIM card? Clean the contact areas of the SIM card. *Do not use water.
- SIM card is not properly inserted.

Insert the SIM card properly.
- SIM card does not work or is damaged? Let your network operator replace the SIM card.

The network connection cannot be established:
- Poor reception? Embark on an open place or, if you are in an enclosed space, near the window.
- You are out of range of the cellular network. For information about the network coverage, Please contact your network operator.
- SIM card is not valid. Contact your network provider.

Bad voice quality:
- Bad network connection quality on the part of the operator? Press the stop button and select again. You will possibly need to switch to a network connection or phone line with better quality.
- Poor quality of local telephone line? Press the stop button and select again. You will possibly a network connection or phone line with better quality.
- Try to turn volume louder.

Outgoing calls cannot be done:

- Check the phone number and try again.
- Have you activated the function call barring? If yes please disable all.
- Check whether the SIM card in the network is registered.
- Check that is enough credit on your SIM card.

You cannot receive incoming calls:

- Check whether the SIM card in the network is registered.
- Check if the phone is turned on.
- Check the signal strength
- Have you activated the function call barring? If yes please disable all.

Send SMS not working

- Please check the SMSC number (communication Central) under the following menu item:
  "Messages - settings - SMS settings - SIM - SMSC - address": here the communication Central number of your carrier should be.

The display is black or white:

- Check the battery status, charge the battery or replace it.
- Check the background image.

- Did the phone get wet?

Locked:

- Check that if the PIN code has been entered correctly. If the PIN code has been entered incorrectly 3 times, the SIM card will be blocked and you will need the PUK code to unlock it: (please contact your network operator for your PUK code).

Tip: If particular problems could not be solved by the information, please visit our Web site **www.jethroshop.comn** and choose the product page of your phone and read the FAQ (frequently asked questions) or contact customer service.

Note: Please do not try to repair the phone yourself.

Battery

- Your mobile phone is powered by a rechargeable battery.
- Note that a new battery only reaches its complete capacity, after two or three periods complete price cycles! Battery energy can end up paying several hundred periods until eventually discharged. When the working time (talk

and standby time) compared to the normal working time is much shorter, you should buy a new battery. Unplug the charger from the mains and from the product if it is not required. If the battery is completely discharged, it may take a few minutes until the price indicator in the show seems to be, or you can call people.

• Use only battery power and Chargers authorized by the product producer. If you do not use the charger, pull the mains plug out of the outlet. Leave the battery no longer than a week in the charger, since an excessive price may shorten its lifetime.

• A completely billed battery with plenty of your time discharges itself when not in use.

• Extreme temperature ranges have a negative influence on the efficiency of your battery.

• Use the battery only for its intended purpose. Never use broken Chargers or battery power.

• Do not short-circuit the battery. An accidental short-circuit can take place by a metallic object of the plus and minus pole of the battery is linked directly together. Short-circuiting the terminals

may harm the battery or the connecting object.

• Throwing battery power in a flame will cause danger of explosion! Batteries may also explode if they are broken. Dead battery power must be disposed of effectively.

• Do not attempt to start the battery power or to destroy. Liquid leaking from an assortment, you are making sure the battery fluid does not get in touch with your skin or in the eyes. If there was a get in touch with, fresh the skin or eyes immediately with water, or seek advice from a doctor

• Dispose of battery power according to the regulatory requirements (E.g. with regard to recycling). Never dispose of battery power in the household waste.

• Keep temperature ranges between 15 ° C and 25 ° C. The mobile phone with a cold or warm battery not may work temporarily, even when the battery has been completely billed. The efficiency is varying especially at temperature ranges below the freezing point.

Phone

If you go through suggestions below, you can avoid any warranty obligations, and you can enjoy your product for many years.

• Please use only original components or components that are authorized by the cell mobile phone producer. The use of components without permission can lead to inadequate efficiency, harm the product or harm even your human body and interfere with appropriate local telecommunications devices.

• Please modify off your cell mobile phone before you fresh it. Use for this purpose damp or antistatic fabric, no substances or cleaning lotions, which may harm the product.

• Because the cell mobile phone capable of generating electromagnetic fields, you should put never found near attractive objects, such as a computer or a hard disk.

• Interference is generated using the cell mobile phone nearby of certain books such as TV, telephone, stereo, and computer.

- Never leave your cell mobile phone in the Sun or in an atmosphere with strong radiation because high temperature ranges considerably shorten the life of digital components.
- Keep the product dry, because liquids may harm the routine.
- Never somewhere abut the product with strong force and do not drop it. Violent actions of this sort may harm the routine.
- Please close any incompatible gadgets on the product.
- Do not attempt to disassemble the product or its battery.
- Keep the cell mobile phone with a flammable or explosive material.
- Never try to price the product, without previously having placed the battery.
- Do not paint your mobile phone. By the color, moving areas may stick and avoid the proper function.
- To detach the device from the mains, pull the cord from the mains outlet. Therefore, you must position the product so that an unhindered having accessibility to the mains outlet is always ensured; so that you can immediately remove the mains plug in a critical situation. To avoid the flame threat,

detach always unplug after each use of the product from the AC store.

In the same way, all recommendations apply to mobile phone, battery, charger, and all components. If any of these items not functioning effectively, take it to your supplier. The staff will assist you and repair or substitute the device if necessary.

Safety instructions

Read these simple guidelines. Failure to follow these rules can have dangerous consequences or violate regulations.

Do Not switch on the phone when the user of the mobile phones is forbidden.
It may come to errors or could cause a hazard.

Traffic safety
Never use the phone in your hand while driving

Switch off in aircraft
Mobile phones can cause interference in aircraft.

Switch off in hospitals
Follow all rules and regulations. Switch off the phone near medical equipment.

Turn off at gas stations
In the vicinity of petrol stations and other places with explosive goods, the mobile phone is switched off.

Interference
A wireless phone can cause errors, which could affect performance.

Read these simple recommendations. Failure to adhere to of these guidelines can have dangerous consequences or violate rules.

Do Not stimulate the product when the user of the mobile phones is forbidden. It may come to mistakes or could cause threat.

Traffic safety
Never use the product in your hand while driving

Switch off in aircraft
Mobile phones can cause a disturbance in aircraft.

Switch off in hospitals
Follow all policies. Switch off the product near healthcare devices.

Turn off at gas stations
In the area of petrol channels and other places with explosive goods, the cell mobile phone is modified off.

Interference
The wireless mobile phone can cause mistakes, which may impact efficiency.

Road safety:
Never use a mobile phone in your hand while worries. Always protected the product in its holder; position the product on the passenger seat or in a place where it can break loose in a collision or sudden stop. Remember: street protection always has priority!

Operating environment:
Don't forget to observe the special rules in a place, and always convert off the product when the use of mobile phones is prohibited
Or if the product causes disturbance or dangerous situations can arise.
Always keep the device in its normal working roles.
Parts of the product are attractive. Steel areas may be attracted to the product, and individuals with listening to aid should not keep the product in the ear with the listening to aid.
Always protected the product in its holder as metal areas may be attracted to the listener. Bring no bank credit score cards or other attractive information carriers

nearby of the product because it contained information this can be deleted.

Electronic devices:

The most modern electronics is guarded against RF (radio frequency) alerts. However, it can happen that certain books against the RF alerts from your cell mobile phone are guarded.

Hearing aids:

Some digital mobile phones can cause mistakes with some assistive listening to devices. If such problems you can get in touch with the support agency.

Other healthcare devices:

The operation of stereo transmitting devices, such as mobile phones, can interfere with the operate of inadequately guarded healthcare gadgets under certain conditions. If you need information about the adequate guarded against external RF energy or have any queries, seek advice from a physician or the producer of the healthcare system. Switch off your mobile phone in healthcare care facilities when you are prompted by signs, posters or other written arrangements. Hospitals or healthcare care facilities, gadgets be used under conditions that could be sensitive to external RF energy.

Labeled sites:

Turn off wherever your telephone, where appropriate requests are suspended.

Hazardous locations:

Switch off your mobile phone in dangerous places, and act according to the directions and recommendations. In such places, a spark can trigger an blast or cause a flame, where you can get hurt or come even to death. We recommend the users convert off the product at support channels. Users have reminded the need to observe restrictions on the use of stereo devices in fuel depots (storage and distribution areas), chemical plants or where blasting. Places, where blast threat exists, are often but not always clearly marked. This includes, for example, the below deck on ships; Environments of pipes and tanks in which substances are; Automobiles that are powered by liquefied petroleum gas (such as propane or butane);

Places where substances or particles, such as grain, dust or metal powders, are located in the air; as well as any other position, where usually are advised to convert off your automobile engine.

Vehicles:

RF alerts may impact improperly installed or inadequately guarded digital techniques in automobiles (E.g. digital fuel injection techniques, digital ABS techniques (anti-lock-systems), digital speed control techniques, air bag systems) impact.

For your automobile information, please get in touch with your automobile producer or its representative. You should also ask for the manufacturers of gadgets that were subsequently fitted in your automobile.

Information:

Information about the documentation (FCC):

This system complies with part 15 of the FCC Rules. The operation is subject to the condition that this revolutionary product does not cause a dangerous disturbance.

Any Changes or modifications not expressly authorized by the party responsible for compliance could void the customer's authority to operate the device.

Note: This device has been examined and found to adhere to the boundaries for a Class B digital system, pursuant to part 15 of the FCC Rules. These boundaries are made to provide reasonable protection against dangerous disturbance in a residential installation. This device generates uses and can radiate rf energy and, if not installed and used in accordance with the guidelines, may cause dangerous disturbance to stereo communications. However, there is no guarantee that disturbance will not take place in a particular installation. If this device does cause dangerous disturbance to stereo or television wedding celebration, which can be determined by turning the device off and on, the consumer is encouraged to try to correct the disturbance by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the device and recipient.

-Connect the device to retail store on a routine different from that to which the recipient is linked.

-Consult the supplier or an experienced radio/TV technician for help.

RF visibility information (SAR):
THIS DEVICE MEETS FCC LIMITS FOR EXPOSURE TO RADIO WAVES
Your mobile phone is a stereo transmitter and recipient. It is made not to exceed the boundaries for visibility to stereo waves (radio regularity electromagnetic fields) adopted by the Federal Communications Commission (FCC). These boundaries include a substantial protection margin meant to assure the protection of all individuals, regardless of age and wellness.

The stereo wave visibility recommendations use a device of measurement known as the Specific Absorption Rate or SAR. The SAR limit for mobile phones is 1.6 W/kg.

Tests for SAR are conducted using standard working roles with the product transmitting at its highest certified energy in all examined regularity bands. The highest SAR principles under the FCC recommendations for this revolutionary product design are:

Head SAR: 0.74 W/kg
Body SAR: 0.87 W/kg

During use, the actual SAR principles for this revolutionary product are usually well below the stated above. This is because, for purposes of system efficiency and to

minimize disturbance on the system, the working energy your mobile phone is instantly decreased when complete energy is not needed for the get in touch with. The lower the ability output of the product, the lower it's SAR value. Body-worn SAR testing has been carried out at a separation distance of 1.0 cm. To meet RF visibility recommendations during the body-worn function, the product should be positioned at least this distance away from one's human body.

Organizations such as the World Health Organization and the US Food and Drug Administration have suggested that if people are concerned and want to lessen their visibility, they could use a hands-free accessory to keep the wireless system away from the head and human body during use, or decrease how long spent using the product. While there may be differences between the SAR levels of various mobile phones and at various roles, they all meet the government requirement. The FCC has granted an Equipment Authorization for this design mobile phone with all reported SAR levels evaluated as in compliance with the FCC RF visibility recommendations. SAR information about this design mobile phone is on information file with the FCC

and can be found under the Display Grant section of http://www.fcc.gov/oet/ea/fccid after searching on FCC ID: 2AAWJSC330

Limitation of liability:
• JETHRO declines all responsibility for injury-related, indirect, special, resulting from an accident or unavoidable, as the predictable viewed or not viewed can be.
• We decline all responsibility and responsibility for losses caused by natural disasters (such as an earthquake, flood, etc.) or other incident or accident (including deliberate or accidental misuse by the producer in the framework of these accidents or other unusual circumstances) that lie outside of our responsibility.
